VAPOR SCRUB - MODEL VS330LP-P

The VAPOR SCRUB Model VS330LP-P, filled with high quality Cameron Great Lakes activated carbon, is designed for effective purification of your vapor stream. The VS330LP-P has the proven ability to remove organic contaminants to non-detectable levels.

The VS330LP-P features a rotationally molded polyethylene (PE) tank with a minimum 1/2" wall thickness for added strength and corrosion resistance. The VS330LP-P features a square base with four-way forklift and two-way pallet jack access. The VS330LP-P container is UN31 rated for shipment of hazardous materials. Adsorber internals consist of a PVC distributor designed for even air distribution across the bottom of the vessel and complete carbon bed use. Upflow operation is standard.

For ease in process maintenance, spent carbon can be removed on site from the vessel by vacuuming out or manual removal through the top 18" manway. (An optional 8" dia. Bottom-sided-mounted gate valve is available to simplify manual removal of spent carbon.) Alternatively, the spent vessel can be shipped off site for reactivation service or disposal. *Please contact your nearest CGL office or representative for additional information on disposal and service options.*
